DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5 and 20, drawn to a semiconductor integrated circuit device comprising a semiconductor substrate, counter, global reset circuit, local reset circuit, and a first circuit.

Group II, claim(s) 6-10, drawn to a semiconductor integrated circuit device comprising a semiconductor substrate having a first and second area, a plurality of counters in the first and second areas, a first clock circuit in the first area, a first circuit in the first area, a second clock circuit, and a second circuit in the second area.

Group III, claim(s) 11-19, drawn to a semiconductor integrated circuit device comprising a semiconductor substrate having a first area and a second area, a first counter in the second area, a first clock circuit, a first circuit in the second area, a first clock signal, and a second clock signal.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the groups have a materially different design which would not be considered obvious variants to one of ordinary skill in the art. Groups II and III fail to teach the global and local reset of group I. Groups I and III fail to teach the first and second clock circuit provided on the first and second area, respectively, of group II and that the second circuit supplies the first circuit

with a second signal containing information on a value of the counter signal obtained upon reception of the first signal, as also described in group II. Groups I and II fail to teach a first counter and a first circuit in the second area and that the first clock circuit is not restricted to being on the first area (claim 11 does not specify a location for the first clock circuit), as described in group III.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
